

A photograph of a volcano erupting. A thick, dark plume of ash and smoke rises from the crater, filling much of the sky. The volcano's rim is visible in the foreground, showing a rugged, dark landscape. The sky is a deep blue with some lighter clouds.

Volcanes

Por Maddie y Anna

A shield volcano is shown erupting at night. The central crater is a bright, glowing yellow-orange, with a dense, fan-shaped plume of incandescent lava spatters and ash particles rising into the dark sky. The slopes of the volcano are covered in a thick layer of lava, which appears as a dark, textured surface with numerous small, bright orange and red spots of lava oozing from cracks and fissures. The overall scene is dramatic and intense, capturing the raw power of the eruption.

Es volcán en escudo. Hay lava y crater. No hay lahar o ceniza. Es una erupción estromboliana.
